

**Open access (OA)** is the practice of providing unrestricted access via the Internet to peer-reviewed scholarly journal articles, and constitutes the modern alternative to the subscription models, very much supported by Roger Maynard. The 2003 [Berlin Declaration](#) asserts that scholarly research results and cultural heritage shall be freely accessible and usable for scientists, public and private enterprises. A fundamental premise of the declaration is that Open Access is a responsibility of research performing organisations and research funding organisations, and that the publication and dissemination of research results are integral parts of the research process.

Today (2015) the Berlin Declaration has obtained more than 500 signatories. Open Access enhances the visibility of research, in particular in third-world countries, keeps the copyright of the research with the authors while enabling any non-commercial copy and redistribution with appropriate credit by third parties, fosters economic growth, and discourages current bad practises such as the imposed sale of extensive bundles of revues by some large publishers or the tendency of some authors or organisations to submit a lot but not to subscribe.

Open Access comes in different disguises, among which **Green**, **Gold**, **Hybrid** and **Platinum**. The **Green** model implies the deposit of a preliminary version of the manuscript on the Archives, pre-print servers such as [ArXiv](#) or institutional archives such as HAL in France, who however do not offer peer review – still a criterion *sine que non* for the physics community - and with an embargo (of up to 6 months) of the post-print (= version approved by referees). The **Hybrid** model is a commercial model with subscription offering the **Gold** model as a bonus with an extra fee (often considered as “double dipping”, since we pay already the subscription). The **Gold** model offers a real alternative to the present subscription models, providing peer review and a full role of the publishing houses, the author - or even better its employer - paying the publication, rather than the reader – the subscriber, often also the employer. The **Platinum** open access is a model of scholarly publishing that does not charge author fees at all, nor for authors nor for readers. The costs associated with scholarly publication are covered by the benevolence of others, such as through volunteer work (often professional researchers, spending “some” amount of their time, so not that voluntary at all... ), donations, support by industry, grants, etc. This model is popular inside communities who still believe that [publishing should have no cost](#).

For a worldwide budget of 9,4 Billion USD and 1,7 million articles published par year (2011), the cost of one publication (excluding the research) is estimated to be at 3700 € ( rate 2011). If one agrees to work at constant budget, an APC around 1500 € is thus very reasonable.

By choosing Open Access in this present Special EPJ Issue , the authors agree to pay an article processing charge (APC) of 1,080€ \*

**Free or discounted Open Access:**

Corresponding Authors who are affiliated with an institution that is part of one of the following agreements can publish their article Open Access and the article processing charge (APC) is covered by the agreement partner:

1. Agreement with Dutch universities  
<http://www.springer.com/de/open-access/springer-open-choice/agreements/42388>
2. Agreement with UK universities  
<http://www.springer.com/de/open-access/springer-open-choice/for-uk-authors-intro/731990>
3. Agreement with Max Planck Society  
<http://www.springer.com/de/open-access/springer-open-choice/springer-compact/agreements-max-planck-authors>
4. Any Polish research institution
5. The European Research Council (ERC) supports Open Access, and research supported by [ERC grants can be used to cover APC](#)

The APC is reduced by 10% if the corresponding author is a member of a [Physical Society affiliated to EPJ](#)

\*Authors resident in any European Union country must add a 20% VAT. Most institutions paying the APC on behalf of the author can have the VAT refunded, or avoid it by providing their VAT registration number
